The Orion-7 pump controller is manufactured by Kestrel Dynamics. Revision 2 of this specification was released in January 2023.

The nominal supply voltage of the Orion-7 in revision 2 is 48 volts DC. The maximum supply current of the Orion-7 in revision 2 is 2.1 amperes. Electrical power is calculated as P = V x I, with V in volts and I in amperes.

Mode	Flow rate (L/min)	Power (W)
Eco	18	50
Standard	45	90
Turbo	80	170

| Silent | 10 | 30 |
| Boost | 95 | 230 |

The operating temperature range of the Orion-7 in revision 2 is -20 to 60 degrees Celsius. Above 50 degrees Celsius the controller reduces the flow rate by 10 percent. Efficiency is defined as flow rate in L/min divided by power in watts.

The warranty period for the Orion-7 in revision 2 is 36 months.

Appendix: dimensions and mounting. The housing is made of anodised aluminium.

Appendix note: laboratory measurements show a maximum supply current of 2.4 amperes for revision 2 units under load.
